7. sharing/afp

The image shows a screenshot of a file sharing configuration window, likely from a Mac OS X system. The window has a dark background with a lighter, semi-transparent overlay containing the configuration fields. At the top left, there are icons for a menu (three horizontal lines) and a back arrow. Below these, the breadcrumb path "Sharing / AFP / Edit" is displayed. The main configuration area is titled "Path \*" and shows a folder icon next to the text "/mnt/Tank1/Transmission". Below this, there are several labeled text input fields: "Name" with the value "Transmission", "Comment", "Allow list", "Deny list", "Read Only Access", and "Read/Write Access". At the bottom, there are three unchecked checkboxes, each followed by a label and a help icon (a question mark in a circle): "Time Machine", "Use as home share", and "Zero Device Numbers". A mouse cursor is visible over the "Deny list" field.
