This document contains instructions for configuring out-of-band management from the BIOS, if needed. When the hardware supports IPMI, the TrueNAS web interface also has IPMI configuration options. For more details, see the IPMI article on the TrueNAS Documentation Hub.

Out of Band Management enables remote control of the system. Administrative control options include powering the system on and off, resetting the configuration, and viewing the system log. Before attempting to configure TrueNAS for out-of-band management, ensure that the out-of-band management port is connected to an appropriate network. Refer to the TrueNAS Mini Basic Setup Guide included with your TrueNAS Mini for detailed instructions on how to connect to physical ports on the system.

Connect the out-of-band management port before powering on the TrueNAS Mini. You might also need to connect a monitor and keyboard.

1 Access the BIOS

Press Delete at the splash screen while the TrueNAS Mini is booting to access the system BIOS.
1.1 IPMI Options

Select the IPMI tab and open the BMC Network Configuration options.

![IPMI Configuration Screen](image)

**IPMI Options**
- **BMC Firmware Revision**: 3.60
- **IPMI STATUS**: Working
- **System Event Log**
  - **BMC Network Configuration**
  - **IPMI Extended Instruction**: [Enabled]

**Key Shortcuts**
+/: Select Screen
11: Select Item
Enter: Select
+/-: Change Opt.
F1: General Help
F2: Previous Values
F3: Optimized Defaults
F4: Save & Exit
ESC: Exit
1.2 DHCP Address Configuration

Set Update IPMI LAN Configuration to Yes to see all options. Set the Configuration Address Source to DHCP to assign the out-of-band management IP address dynamically. The menu shows any IP addresses that have been assigned by DHCP.
1.3 Configuring a Static IP Address

Set the Configuration Address Source to Static to assign a static IP address for out-of-band management. Enter the correct values for the Station IP address, Subnet Mask, and Gateway IP Address fields to assign a static IP address for out-of-band management. Be sure to completely fill all four octets for the Station IP address.

Save the changes, exit the BIOS, and allow the system to boot.
2 Logging in to the IPMI Web Interface

Connect to the TrueNAS Mini out-of-band management port by entering the IP address into a web browser from a system that is either within the same network or which is directly wired to the array. A login prompt appears.

Log in using the default credentials:

- **Username:** ADMIN

- **Password:** If no password sticker is located here, check the back of the system. If the sticker on your unit has been lost or damaged, contact the iXsystems Support Team.
## 3 Contacting iXsystems

For assistance, please contact iXsystems Support:
